CARTS / BUGGIES

Our selection of carts and buggies is designed to meet a variety of material handling needs, offering options in both 400-pound and 600-pound capacities. These capacities are calculated based on a standard density of 55 pounds per cubic foot, ensuring that the carts can handle substantial loads efficiently. Whether you're moving raw materials, finished products, or anything in between, these carts provide a robust solution for your transportation needs.

KEY FEATURE

Each cart is available with or without handles, allowing for customization based on your specific requirements. The handles provide ease of maneuverability, making it simpler to navigate tight spaces or transport goods over longer distances. For operations that require a more streamlined or stackable solution, the handle-free option offers versatility and space-saving benefits.

COMPATIBILITY

Lids are available for these carts, offering an extra layer of protection for the contents. This feature is particularly useful in environments where items need to be shielded from dust, moisture, or other contaminants. The lids also contribute to the overall organization and cleanliness of the workspace,

helping to maintain the quality and integrity of the materials being transported. With a range of configurations to choose from, these carts and buggies are a practical addition to any industrial or commercial setting.
